

bayernets GmbH placed order for AUGUSTA project

22.09.2023 | Artikel des Rohrbiegewerk der Salzgitter Mannesmann Grobblech GmbH

bayernets GmbH has commissioned EUROPIPE GmbH and the pipe bending plant of Salzgitter Mannesmann Grobblech GmbH to supply the transmission line pipes and the associated inductive pipe bends.

The planned AUGUSTA gas transport pipeline will connect the Kötz network node with the Wertingen compressor station. For this gas transport pipeline, which is designed for a maximum operating pressure of 100 bar, bayernets GmbH has purchased around 40.5 km of 28" (Ø 711mm) L485ME steel line pipe from EUROPIPE GmbH.

The associated 222 inductive pipe bends are manufactured by SMGB in Mülheim an der Ruhr to exact dimensions and fit. The necessary mother pipes for bends, measuring Ø 711 x 17.5 mm, are also manufactured by EUROPIPE GmbH.

This pipeline not only secures the current and future gas supply in the region, but also sets the course for hydrogen transportation as an important component in the energy system of the future.
